At the MOTEK 2017 (International trade fair for automation in production and assembly, 9th – 12th October) – WERMA will be showing innovative systems for process optimisation in manufacturing, logistics and warehouse:

- **StockSAVER for production logistics**

StockSAVER is a simple retrofit system for any FIFO flow rack and will solve all typical Kanban problems, free space for more value-adding activities on the shop-floor and improve cash0-flow. StockSAVER automatically generates the requirement for replenishment orders to be created and thus reduces the risk of human errors and reducing the need for excessive safety stocks. StockSAVER is easy to install and use and can be extended by purchasing pre-configured extension kits.

- **SmartMONITOR for manufacturing organisations**

By wirelessly networking signal towers WERMA offers a simple yet effective cost effective and easy to retro-fit alternative to traditional machine data collection systems. The system delivers quick and uncomplicated relevant data on machines, equipment and manual work-stations at just the touch of a button. Reaction time to issues can be reduced, the manufacturing process optimised and the user will no longer be unaware of downtime and disruptions. All the activities monitored are detailed in easy-to-produce reports which can contribute to lasting improvement measures to the processes being made.

- **AndonSPEED for the warehouse**

This unique intelligent and innovative call-for-action system is ideal for warehouse operations. Not only are disruptions to the process indicated by the andon lights immediately and clearly this data is also collected wirelessly and documented thereby

enabling further analysis of unproductive time. Response to disruptions and downtime will save time long-term. The wirelessly networked system will also provide a central control station overview of activities and can send e-mails calling for action automatically.

About WERMA:

WERMA Signaltechnik GmbH & Co. KG is an international company with more than 350 employees located in 7 sites. The family owned business, established in 1950, is one of the global leaders in signal devices and is the technology leader in its field.

The company established an industry standard with its modular signal tower range. Today WERMA manufactures a wide range of optical and audible signal devices as well as intelligent systems for process optimisation in general industry and logistics. In a world-wide first, WERMA signal towers can be wirelessly linked to provide a simple retro-fit alternative to traditional machine monitoring and data collection systems.
